

Résumé Overview

Résumé lets you add on to your current application data with new information. You can build new applications on the UNIX or DOS system that fully integrate with existing data. Using our tools, you can expand your capabilities, without affecting the core reliability and functionality of your database.

Component Descriptions:

- Data Editor lets you access and change any data element with ease. Query capabilities let you locate the records you are interested in, and an automatic screen formatter lets you see and maintain the data in a normal format.
- Data Update provides mass or batch updating capabilities. One time processes that change large amounts of data are created quickly, and executed rapidly. Hours of manual data entry are easily eliminated.
- Data Forms gives you the ability to create more traditional data entry forms, combining existing application data with new data as needed, along with numerous display and editing features to provide flexible yet efficient data entry and data display.

Additional Benefits

- Add on for DataWriter
- Y2K compliant
