

MAU Overview

Before AutoUpdate, the only way to enter or change data in the system, was to have the changes made manually with data entry personnel. AutoUpdate revolutionizes data entry, by performing the same actions as a data entry clerk, but considerably faster.

AutoUpdate is also extremely reliable because it uses the same data entry screens in Matkon as you would to make the changes, and it does not make typos. So if you ever have to perform updates to your data that requires weeks, days, or even hours, you might want to consider AutoUpdate and realize the savings in time and money that it provides.

Benefits

- Save time, by completing tasks quickly and on time. Changes are made in minutes or hours, instead of days, so updates to your data are available to your company today, not tomorrow, or next week.
- Realize savings on labor, as it enables one individual to perform the work of many.
- Relax knowing that AutoUpdate cannot make typing errors that could corrupt your data.
- Benefit from the comfort and familiarity of the windows environment.

Features

- Reads data from an excel spreadsheets and enters that information into your Matkon™ system for you.
- Make changes to INVMST, INVLOC, DPRO, VENMST, contracts and others.
- Allows you to Delete records from INVMST, INVLOC, DPRO, so it is perfect for data cleanup and preparing for migrations.
- In the contracts section, you can now update both contract master information as well as the item detail information.
